

Permanent Recording of Redberry Lake's Water Level

Since 1966 the water level in Redberry Lake has been recorded. The measurement starts usually in May or June and ends with the first snow fall (October or November).

This graph shows the highest and lowest water levels of Redberry Lake in each year. The highest level was recorded in June 1966 (506.45 cm), the lowest in November 2004 (502.22 cm). Since this event the water level of Redberry Lake has been rising again.

No measurement took place in 1992 and in the years 2005, 2006 and 2007 the lake level was recorded only once each year (Oct. 2005, Nov. 2006, and May 2007).
